

Left aligned

Short paragraphs are useful for checking text wrapping without creating a large fixture. This paragraph should wrap across several lines when it is placed in a narrow box.

The same source text can be rendered with left, centered, right, or justified alignment. Keeping the content stable makes visual comparison easier when the text engine changes.

Margins, line height, and width all affect the final layout. These examples keep the measurements explicit so regressions are easier to spot in the generated PDF.
